

Microsoft Teams Direct Routing.

Give Microsoft Teams a voice with our cost-effective Direct Routing service

A quick and flexible alternative to on-premise telephony solutions

Utilising our SIP Trunking service to route calls over the internet, Direct Routing integrates with the Microsoft Teams platform to enable staff to make and receive calls from their connected laptop, mobile device or compatible handset. With many of the features you'd expect from a traditional phone system, such as call routing and voicemail, transforming Microsoft Teams into your unified communications solution is a hassle-free and cost-effective way to adopt cloud-based telephony.

Business Benefits of Direct Routing for Microsoft Teams

Reduce costs

There's no need to invest in additional licenses to benefit from voice features in the Microsoft Teams platform.

Advanced features

Highly reliable, resilient architecture provides access to enhanced call features.

Future-proof

Calls are made over the internet with no reliance on legacy technology.

Agile working

Staff can make and receive calls from any connected device-removing the hassle of taking their office phone home.

Improve responsiveness

Everything staff need to communicate and collaborate accessible in one unified platform, increasing availability and responsiveness.

Stress-free migration

Switching is simple and you can bring your existing business phone numbers with you. Our experienced team will manage the migration and port process for you.

Thinking of switching?

If your business is already using Microsoft Teams or if you're looking to embrace mobility, Direct Routing could be the ideal solution. Low-cost and easy to install, our team can set up your cloud-based communications solution remotely.
