NTE Aware.

Online cyber-security training

93% of all data breaches are caused by phishing or other forms of social engineering which target your employees*

A modern security culture should enable users to work in the way they want. But, with the introduction of remote working strategies comes increased access to company data on personal devices - it's now harder than ever to ensure staff are equipped to deal with potential threats.

When it comes to defending businesses from cyber-attacks, **36% of SMBs said employee training is the second most effective method***, following closely behind backup and recovery solutions. Engaging staff with interactive and fun educational sessions can maximise the efforts of technology and processes already in place whilst encouraging staff to take responsibility for their own cyber actions.

The business benefits:

Empower your workforce

Staff training gives employees the knowledge and confidence to handle their cyber security responsibilities. They will be encouraged to work together and take corrective action to prevent cyber-attacks.

Retain customers' trust

Cyber-attacks can seriously damage a company's credibility, resulting in a loss of customers and risking partnerships. Incorporating training into your employee's role demonstrates your commitment to protecting stakeholders and meeting your regulatory requirements.

Minimise risk

Your cyber security defences are only as strong as your weakest link with the most common vulnerability being human error. Educating staff to spot phishing attacks in their tracks reduces the level of risk and decreases the chance of infection.

Meet regulatory requirements

To help combat increasing threats and safeguard sensitive business data, businesses in a number of industries are now required to train staff on cyber security and data protection to meet industry compliance standards.

nte

Empower your staff to become cyber-savvy.

NTE Aware is an online training platform for employees, taking staff through a typical cyber-attack journey supported by expert advice. Configure the platform in under 2-3 hours, kick off training campaigns, knowledge assessment quizzes and simulated attacks in minutes.

The service includes:

Phishing simulations

Use library templates of realistic phishing emails or create your custom templates. Track user activity to assess the level of phishing risk in your business. In addition, an alert button allows employees to flag suspicious emails.

Security awareness testing

Raise employee cyber security awareness and equip your team with the tools to identify threats and prevent attacks.

Real-time intervention awareness

Create security awareness content on the platform such as snippets of security policies, tips and warnings. The content can then be sent to an employee in response to an alarm having detected their risky behaviour.

Cyber knowledge assessments

Assess the level of risk using our cyber knowledge risk assessment quizzes. Assessment results help your business to demonstrate compliance to legal and regulatory requirements.

Risk & compliance reporting

Quickly produce reports that measure and track security compliance in order to achieve a "meet requirements" result in an internal audit or external review such as ISO 27001, NIST, Cyber Essentials, GDPR, UK Data Protecton and Irish Data Protection.
