NTE Defence.

Next-Generation Firewall

Hackers hide in networks for an average of 140 days before detection*

In the remote working era, network firewalls must do more than detect attacks on your network. Traditional firewalls simply police the flow of traffic which enters and exits the network, alerting admin of unfamiliar traffic - leaving room for advanced ransomware to bypass outdated security controls.

Next-Generation Firewalls are a new way of delivering firewall and other network security capabilities as a monthly cloud service, implemented and monitored by a team of specialists. With advanced layers of security built into them to protect against sophisticated attacks, they provide proactive protection to ensure you have uninterrupted network availability and robust access to cloud-hosted applications.

The business benefits:

First line of defence against hackers

A Next-Generation Firewall acts as a shield between your internal business networks and internet usage. Because it's managed, all updates and configurations are handled by a team of experts, ensuring there's no room for error.

Peace of mind with greater control

Cyber threats don't operate exclusively during office hours, they often strike when you least expect it. With a managed firewall, you can benefit from knowing your business is being monitored around the clock.

Reduce costs

There's no need to invest in multiple layers of software and in-house cyber specialists. This is all handled on your behalf for just one transparent monthly payment.

Simplified management

Focus on your day-to-day business, safe in the knowledge that threats are being handled in the background. Our team can provide you with daily, weekly or monthly insights on your network's cyber health.

Protect your business from unwanted intruders.

NTE Defence is a monthly subscription firewall service designed to secure your network, provide uninterrupted network availability and robust access to cloud-hosted applications for small to medium businesses.

With remote support during office hours and 24/7 online support via telephone, chat or email, our cyber-security team are on hand to offer your business continuous guidance and support.

NTE Defence can be ordered with new or existing internet connectivity, consolidating your connectivity and cyber-security into one easy monthly payment.

The service includes:

- **Intrusion Prevention** for automated protection against known and unknown cyber threats.

- **Anti-virus** with automated content updates and the latest malware protection.

- **Web Filtering** ensures that staff cannot access suspicious websites and allows your business to block unwanted websites and content.

- **Application Control** manages the usage and prioritisation of your business-critical applications, such as email etc.

- **Vulnerability Scanning** constantly monitors your network for security weaknesses and provides alerts and fixes.

- **Anti-spam** functionality also reduces the amount of spam at the perimeter of your network.

- **Security rating updates** also provide your business with regular, meaningful reports and feedback in the form of actionable configuration recommendations and risk indicators.
