

Hosted Desktop.

Access your entire office environment on any device, anywhere

Empower remote staff to work productively with improved agility and security.

Our Hosted Desktop solution provides remote workers with access to their files, emails and business-critical applications on any connected device, from any location. Unlike file-sharing applications or a VPN, a Hosted Desktop allows users to seamlessly access their exact Windows 10 environment across multiple devices. As individual user's software and data are stored within the cloud, there's no need to download or transfer anything.

Business Benefits of Hosted Desktops:

Better cash flow

Hosted Desktops are billed monthly in one transparent payment without any upfront investment.

Greater security

Only authorised users can access data with multi-factor authentication as standard. Advanced cyber security software can be integrated for added protection.

Increased scalability

Services can be scaled up or down on a monthly basis with pay-as-you-go pricing. New desktops can be configured and launched in a matter of minutes.

Improved accessibility

Our Hosted Desktops offer an incredible 99.9% uptime with accessibility from any internet-enabled device, anywhere.

Centralised management

All desktops are configured with custom profiles ensuring patching, applications and configuration is consistent across all users.

Specialist support team

Our 24/7 dedicated service desk team is comprised of UK office and field-based engineers who specialise in cloud technologies, backed by SLAs.

Supercharge remote working capabilities with Hosted Desktops

As remote and hybrid working become commonplace for the modern worker, your business needs the tools to work securely from multiple locations. Request your free demo to learn more about our Hosted Desktop features and how they can benefit your business.
